
(a) Two populations; the median falls between them
median of all 256 rows: 19,204
1 gas + 1 ICS (128 rows)
5 gas rings + 3 ICS (128 rows)
rows
Δ(−2 ln L) from adding the flat bubble mask (step 1)
(b) Flat vs. structured, row by row: the two splits disagree
1 gas + 1 ICS
5 gas rings + 3 ICS
rows
Δflat − Δstructured per row (> 0: flat mask fits better)
