
Halo significance at 20.8 GeV against diffuse-model fit quality, three bubbles templates and three binnings
residual (4.3 GeV) bubbles
flat 2014 mask
structured 2017 map
10° cells, nine bins, no PSF
sign × √TS at 20.8 GeV
2° cells with PSF, 5.6–130 GeV
1° cells with PSF, 5.6–130 GeV
236/257 favor a halo
257/257 favor a halo
132/257 favor a halo
NFW counts at 20.8 GeV
$\left[\ln \mathcal{L} - \frac{1}{2} p \ln n\right]_{\text{model}} - \left[\ln \mathcal{L} - \frac{1}{2} p \ln n\right]_{\text{best}}$ (BIC-penalized fit quality)
GALPROP, 1 gas + 1 ICS
GALPROP, 5 rings + 3 ICS
A2020 ring model
Galp21 (v57, isotropic IC)
Totani's baseline model
Totani's §3.4.4 variants
hollow: quadrant test fails
